Bug

Title:

Unable to Deselect Preselected User in Timesheet Dropdown Without Selecting Another User First in Calendar view

Project / Module

TrackX - Attendance Management → Timesheet

Description:

As a QA tester, I observed that during manual and automated testing, In the **TrackX Timesheet** module, under the user dropdown where multiple users can be selected, the dropdown:

- Has **one predefined user (Syed Hamza Imran)** selected by default.
- This user **cannot be deselected directly** unless another user is selected from the dropdown.
- You are **forced to select another option first** before you can unselect the initially selected user.
- You **cannot clear all selections** and start fresh unless another option is chosen first.

Steps to Reproduce:

- Navigate to **Attendance Management → Timesheet**.
- Click on calendar view.
- Observe that a user (e.g., **Syed Hamza Imran**) is **pre-selected** in the dropdown.
- Attempt to **deselect the user directly**.
- Notice that the user **cannot be removed** unless another user is selected from the dropdown.
- Once another user is selected, the initially preselected user can be removed.

✓ Expected Result:

The user should be able to:

- Freely **deselect any selected user**, including the preselected one.
- Have the option to **clear all selections** and leave the dropdown empty if desired.
- **Select and deselect** users without dependency on other selections.

✗ Actual Result:

The predefined user is locked in the selection and **cannot be deselected independently**. Deselect action is only possible **after selecting a different user**, which is unintuitive and restricts user control.

Impact

- Reduces usability and flexibility of the dropdown.
- Prevents clear, fresh selections without workarounds.
- May confuse or mislead users into thinking the preselected user is mandatory.

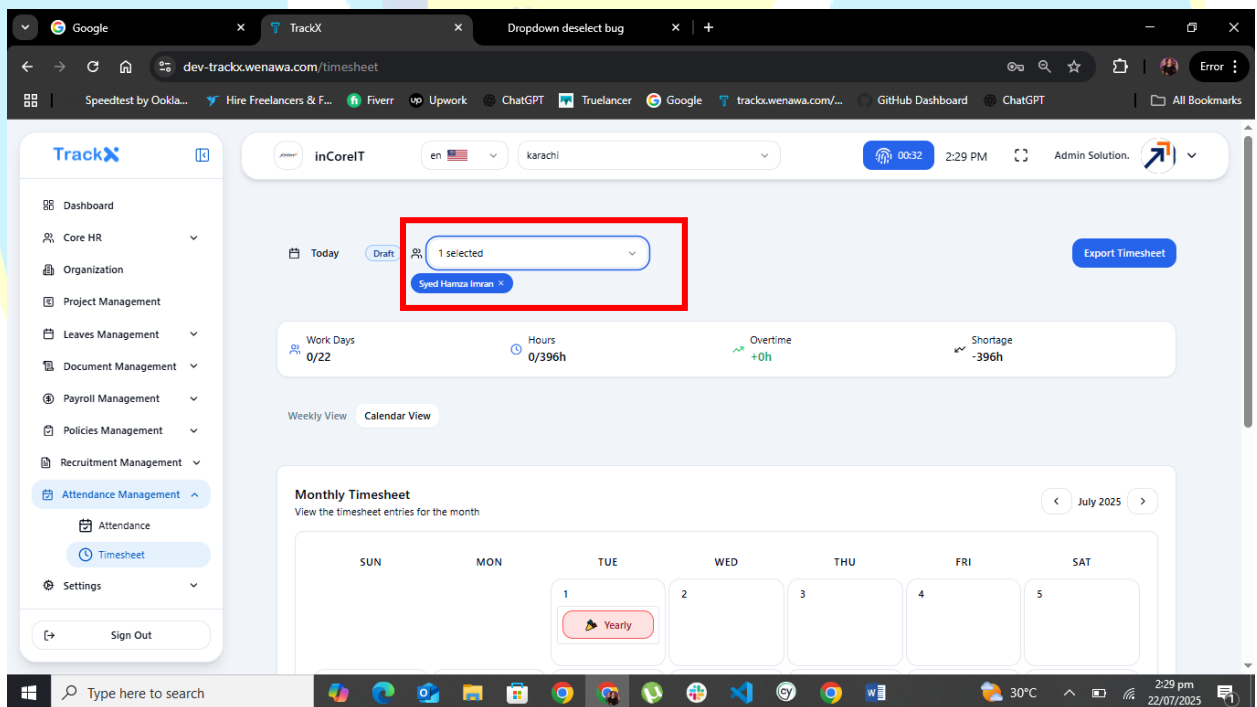

Suggested Fix

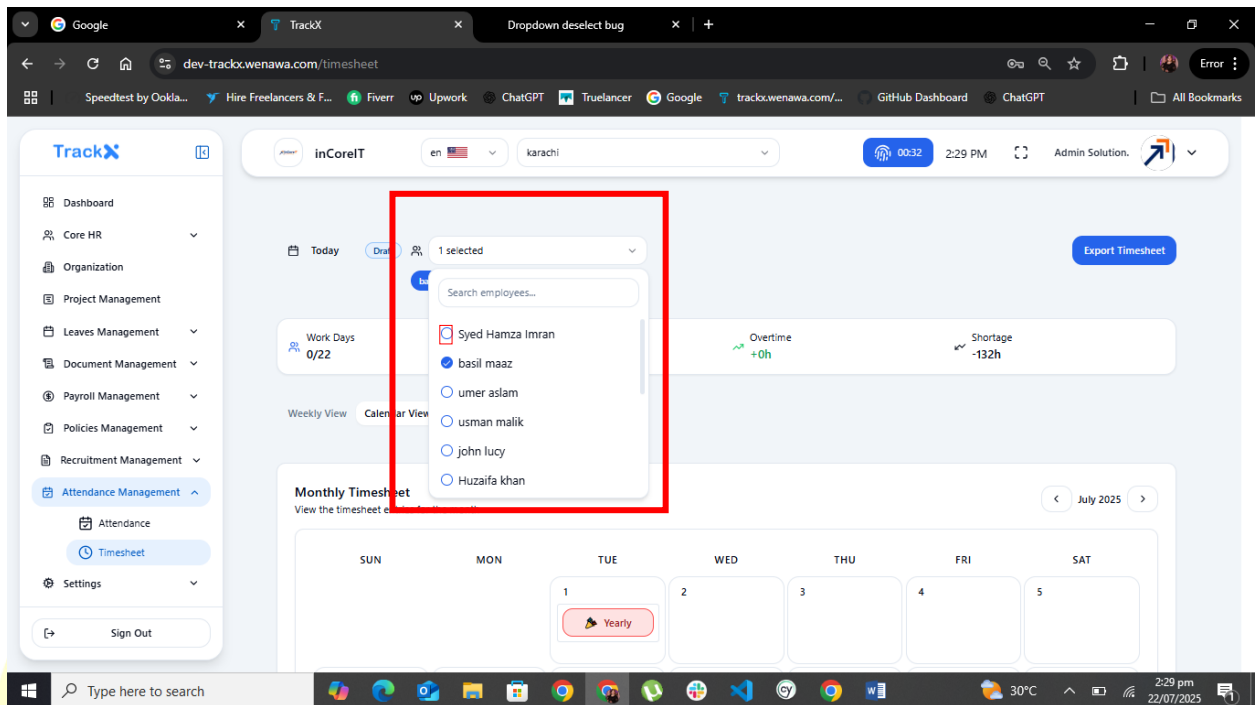

- Ensure the dropdown component allows null or [] as valid selection state.
- Remove any hardcoded restrictions or default locked selections unless required by business logic.
- Review the multi-select logic to allow **free deselection** of all users.

Environment:

- Platform: Web
- Browser: Chrome Version 137.0.7151.122 (Official Build) (64-bit)
- URL: <https://dev-trackx.wenawa.com/timesheet>
- OS: Windows 10 pro

Severity: Major
Priority: Medium
Status: New

Priority:
Medium

This issue affects the user experience but does not block core functionality. Should be resolved soon to improve usability.

Severity:
Major

The bug causes incorrect or restricted behavior that affects multiple users and may lead to confusion or incorrect timesheet data entries, though it doesn't crash the system.
